## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of Group I (claims 28-41) in the reply filed on 4/21/05 is acknowledged. The traversal is on the ground(s) that examination of groups I and II together does not place undue burden on the Examiner, as they have the same search area. This is not found persuasive because the Group I claims are directed towards apparatus which would require a search in class 257 whereas Group II claims are directed towards process of making which would require a separate search in class 438. Therefore since the claims of Group I and Group II require two separate searches in two separate fields, the requirement is still deemed proper and is therefore made FINAL.

Claims 1 thru 27 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 4/21/05.

### ***Examiner's Amendment*** ✓

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 1-27, previously withdrawn from consideration for being drawn towards a non-elected invention, have been cancelled.

Authorization for this examiner's amendment was given in a telephone interview with Joe Muncy on 6/15/05.

*Allowable Subject Matter*

3. Claims 28 thru 41 are allowed. The following is an examiner's statement of reasons for allowance: The references of record, either singularly or in combination, do not teach or suggest at least an image sensor device, comprising: a first dielectric layer overlying the spaces **but not the photosensors**; a **conformal** second dielectric layer on a sidewall of the first dielectric layer, wherein the second dielectric layer has a second refractive index; and a third dielectric layer overlying the photosensors **but not the spaces**, wherein the third dielectric layer has a third refractive index; wherein **the third refractive index is greater than the second refractive index**. Akai 4,914,301 discloses an X-ray detecting device comprising p-n junction photo-detecting structures 12-1 to 12-n, scintillator elements 1-1 to 1-n, and a thin plate of metal 2A, however, the thin plate of metal is clearly not a dielectric. Abe 6,246,081 B1 discloses solid-state image sensor comprising sensor 6, however, there is no first dielectric layer overlying the spaces but not the photosensors or a conformal second dielectric layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
